

Video Showcase UI

Netflix-like browsing experience
Next.js / TypeScript / Supabase
Focused on interaction feel and UX stability

Problem

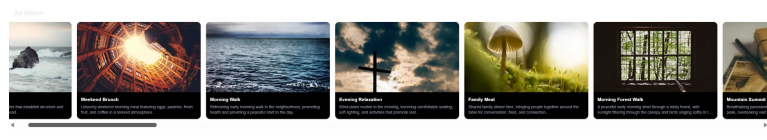

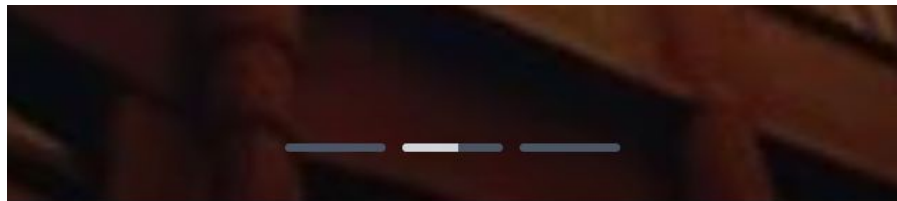

- Initial load becomes heavy
- UI state resets during interaction
- Hard to understand where to focus
- Keyboard and hover interactions considered

Approach

- Separate hero and browsing areas
- Pause automatic behavior during interaction
- Make UI state predictable

Key Features

- Hero auto slide with hover pause
- Progress-based indicator (right direction)
- Horizontal content rows
- Lazy loading and skeleton UI

What I Focused On

- Reducing UX discomfort
- Simple and stable state management
- Interaction feel over visual noise

Result

- UI/UX design thinking
- Interaction-aware implementation
- Ability to refine and finish a product
